CONNECTICUT DISC AND LASER THERAPY CENTERS

Referral information

Dr. James J. Dalfino, DC • Chiropractic evaluation in Shelton, Connecticut

Coordinate an evaluation

Call **(203) 922-9277** to discuss referral coordination and arrange secure records exchange. Our team will confirm the appropriate transfer method. Do not send patient names, diagnoses or records through the general website contact form.

When to contact our office

Questions about conservative care for persistent back or neck pain, disc-related symptoms, sciatica or joint discomfort. History, examination, prior care and patient goals guide suitability. A symptom or imaging finding alone does not establish candidacy for a treatment.

Services available after individual assessment

Chiropractic care • DRX9000 spinal decompression • MLS M7 laser therapy • EmField Pro HEIT • Pulse PEMF. Not every service is appropriate for every patient. Further medical assessment or specialist referral may be recommended.

Useful information to coordinate

Referral question; relevant history and precautions; prior treatment and response; available imaging reports; referring office contact and communication preferences. Coordinate records and updates with patient authorization as applicable. Patients should continue prescribed care with their treating clinician.

Routine referral or urgent assessment?

New bladder or bowel changes, saddle numbness, major progressive weakness or other emergency symptoms require urgent medical assessment. A routine chiropractic referral should not delay emergency or surgical evaluation.

First visit and costs

The $99 offer includes consultation, examination, report of findings and first treatment when appropriate. It is not the price of a complete treatment program. Further care, suitability and costs are discussed individually.
